

Nakama

AI agents that work with your team.

Simple like ChatGPT. Built so the team owns it.

Teams already pay for ChatGPT. They still do not own the agent.

01

Not enough

ChatGPT cannot act as a team agent.

02

Too hard

OpenClaw and Hermes do not do orgs.

03

Missing

Why it fails

Buying seats did not buy you an agent.

Separate threads.

No shared memory the org can keep.

No shared agent where the team already chats.

The workspace is not the agent.

Solution

Simple to use. Able to
act. Built for teams.

The middle between ChatGPT and OpenClaw /
Hermes Agent.

Looks like ChatGPT. Runs like an agent platform.

01

Surface

Dashboard, channels, and 1,000+ integrations.

02

Work

Tools, skills, memory, coding agents.

03

Team

Invites, roles, one agent per job.

Not every agent should be able to do everything.

01

Role

Who is allowed to talk to it.

02

Profile

What it is allowed to touch.

03

Tenant

What it is not allowed to see

Why now

The model is a utility. The agent is the asset.

01

Today

Everyone can call the same model.

02

Trap

The history lives in a vendor tab.

03

Later

The org that kept the agent pulls away.

Competition

Team agents vs personal chat vs a laptop CLI.

Shared agents

ChatGPT / Claude

Workspace GPTs
